

BAN HO - WHAT IS LEFT AFTER THE FLOOD

Story by: Tan Kho May

Sir, through the television station, we know that there was a sudden flood in your commune, right?

Yes! This flood caused great damage to people in terms of property and crops. Fortunately, there was no loss of life.

Sudden floods have extremely devastating effects: floodwaters flooded people's houses and swept away televisions, refrigerators, tables, chairs and even three cars.

I'll show you some of the documentary photos that we still keep.

Floodwaters also broke a bridge, isolating the headquarters of the Commune People's Committee, 1 village, 1 health station and a number of households.

Fortunately, everyone was safe, despite this been a very sudden flood...

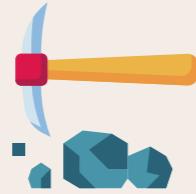

Can you tell me when the flood occurred and what measures the local government took to support people?

The government and organizations held an emergency meeting in the night to make a plan to support the people...

To cope with the extreme weather situation when the rainy and stormy season comes, the motto "four on the spot" (on-the-spot command, on-site forces, vehicles, supplies and logistics) and "three readiness" (active prevention, timely response, emergency recovery), need to be effectively implemented

- Active prevention
- Timely response
- emergency recovery
- On-the spot command items
- On-site supplies and logistic
- On-site vehicles
- On-site force

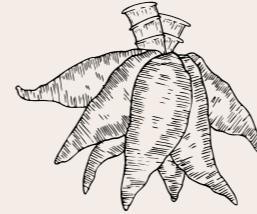

On-site vehicles

People's everyday items are used to overcome the aftermath of floods, especially in isolated areas..

On-site supplies and logistics

Families share food during times when relief forces cannot reach them

On-site force

YOUTH

ARMY FORCE

LOCAL PEOPLE

On-the-spot command

Families share medicines, firewood, sandbags, living utensils....

After the water receded, the local government mobilized the commune militia, the Sa Pa Military Command, the Youth Union and the community, to clean, repair houses, reinforce works and propose the relevant levels to support people in stabilising their lives.
